## Math Facts for the SHSAT

## "Trick" for Squaring Numbers <br> that end in " 5 "

| Example: | $15^{2}=$ |  |
| ---: | :--- | :--- |
| Step |  | 25 |
| 1. | Write " $25 . "\left[5^{2}=25\right]$ |  |
| 2. | Multiply the "number" (1) that precedes 5 by the number <br> that follows 1 if you were counting, i.e., 2 | $1 \times 2=2$ |
| 3. Write that product, 2, in front of " $25 . "$ |  |  |

Example: $\mathbf{2 5}^{\mathbf{2}}=$

| 1. | Write "25." [ $\left.5^{2}=25\right]$ | 25 |
| :---: | :---: | :---: |
| 2. | Multiply the "number" (2) that precedes 5 by the number that follows 2 if you were counting, i.e., 3 | $2 \times 3=6$ |
| 3. | Write that product, 6 , in front of " 25 ." | 625 |

Example: $105^{2}=$

| Step |  |  |
| ---: | :--- | :---: |
| 1. Write " $25 . "\left[5^{2}=25\right]$ | 25 |  |
| 2. | Multiply the "number" (10) that precedes 5 by the number <br> that follows 10 if you were counting, i.e., 11 | $10 \times 11=110$ |
| 3. Write that product, 110, in front of "25." | 11,025 |  |
